

IP7-SS20

Getting Started Guide

#### Introduction

The IP7-SS20 IP paging endpoint enables 1-way IP audio to analog speakers from TalkMaster<sup>™</sup> software and/or VoIP Systems supporting industry standard SIP 2.0 (VoIP) protocols. The internal amplifier can deliver 20 watts of audio power to one or more speakers. Power must be supplied by external 24-32V AC or DC power supply.

The SS20 is configured using TalkMaster Admin Console. This *Getting Started* booklet covers basic hardware installation and software configuration of the IP7-SS20.

# **IP7-SS20** Installation

Please refer to the IP7-SS20 Reference Manual available on the **Software Installation CD** for additional information on installation and setup

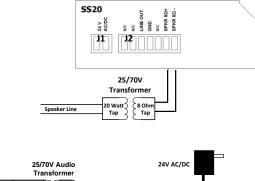

#### **Important Installation Guidelines**

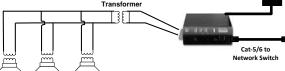

- Choose 12-18 AWG wire for speaker connections. Select wire gauge suited to minimize power loss for specific distribution method and wire run distances
- Do not install near power distribution equipment or noise generating equipment such as stepper motors
- Conform to industry standard practices for grounding
- Avoid sharing AC power and audio signals in conduit runs

IP7-SS20 to 25/70V Audio Distribution Line with one or more Speakers

25/70v operation requires an audio transformer connected to each IP7–SS20 and speakers that accept 25v/70v inputs wired in parallel

- Connect SPKR 80+ and SPKR 80- (J2-6 and J2-7) to the 8 ohm side of a 25/70 audio transformer
- Connect the appropriate 25/70v winding leads to the speaker distribution line. Choose the winding tap with a value equal to or slightly higher than 20 watts

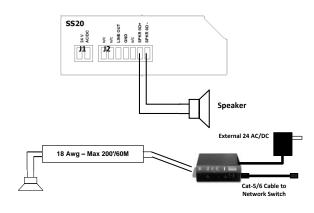

# 25/70V Distribution Line Installation Guidelines

- Each speaker must have its own 25/70V transformer
- All Speakers must be wired in parallel
- Make sure to maintain the same wiring polarity between each speaker
- Do not mix speakers tapped for 25V with a 70V distribution line or speakers tapped for 70V with a 25V distribution line
- Each speaker's relative volume can be set by selecting the appropriate wattage taps from the transformer
- When the wattage from each speaker is added together, the total cannot exceed the available wattage for the IP7. IP7 amplifier wattage is reduced by 30% loss due to transformer loss
- Snip off any exposed wire ends on the transformer to prevent shorting

# IP7-SS20 to 8 Ohm Paging Speaker

- Connect SPKR  $8\Omega$ + and SPKR  $8\Omega$  (J2-6 and J2-7) to the terminals of an 8 Ohm speaker (polarity independent)
- To connect multiple 8 Ohm speakers to a single IP7, refer to the *IP7-SS20 Reference Manual*

#### **Power Options**

• 24v AC/DC at 50 watts connected to **J1-1** and **J1-2** connectors or **Aux Power** 2.1mm barrel. Wiring connections are polarity independent

#### **Network Installation**

• Connect an RJ-45 cable between the **Ethernet 10/100** connector and a network switch. A cable may also be connected directly to a PC during configuration and setup.

## **Mounting Instructions**

The IP7 series is design to be mounted on standard 35mm DIN rail or surface mounted using the optional surface mounting plate.

- **DIN Rail Clip** Tilt top of unit (J1, J2 connectors facing up with Volume buttons facing forward) back towards the DIN Rail until the IP7-SS20 DIN clip catches the top of the rail. Press in at the bottom of the IP7-SS20 to snap into place.
- Surface Mount Plate Snap the optional surface mount plate in half and secure it to the back of the frame using the provided screws so that the mounting holes extend past the edges of the case

# TalkMaster<sup>™</sup> Software

TalkMaster<sup>™</sup> Server Software is a suite of Windows<sup>®</sup> based application used to configure and manage Digital Acoustics IP7<sup>™</sup> and ii3<sup>™</sup> Intercoms and Paging endpoints. Applications included with the TalkMaster Server are the **Admin Console** for configuration of the Server and IP Endpoints and the **Operator Console** for managing 2-way Intercom calls and 1-way Paging announcements.

Please refer to the *TalkMaster Admin Console Reference Manual* on the **Software Installation CD** for additional information software setup options

- Install the TalkMaster Software using the Digital Acoustics' Software CD
- Refer to the previous section to power up and connect the IP7 series device to the network.
- Record the unique ID# from the bottom label of the IP Endpoint and note the location where it will be installed
- Start the Admin Console and logon with an Operator ID of admin and the default password of admin

Logon Require	d 🗙
Logon ID Password	
ОК	Cancel

 Click the Settings → Endpoint Defaults tab and make any changes required for your installation. For instance, if you want to assign static IP Addresses, uncheck the Assign Automatically with DHCP checkbox

ĭ

Endpoint Defaults eSIP Defaults Settings File Locs Paging Options

• Click the **IP Endpoints** tab and press the **FIND ALL** button in the lower right hand corner of the screen. Newly discovered IP Endpoints appear in the list

Delete	Save	Find All	Replace
Delete			Kopideo

 Click on the IP Endpoint to be configured (the "Icom ID" column must match to the Intercom's previously recorded ID#)

Setup	Queues	IP Endpoints	Messages	Paging Groups	Operators	Audit	Status
Auth	Locatio	n Name	Icom ID	IP Address	Queue	~	
$\bigcirc$			0397C6	10.3.3.21	Unassigne	Ы	

- Click the **Defaults** button and enter a descriptive name into the Location Name field
- Make any other desired changes, then select the **Options 2** tab

Configuration Option:	s 1 Options 2	Options 3	eSIP
Туре	Client	~	
Location Name			
Assign IP autor	natically with DH	ICP

Server IP	10.3.3.242	: 300	D
NIC Version 6.1.12 ICOM Version 6.1.		2	Defaults

- Check the **Remote Listen Disable** option (the SS20 does not support a microphone, so the **Operator Console** should never go into **Listen** mode)
- Optionally, select the **Paging Groups** tab to include the SS20 into one or more paging groups

Change additional IP7 Configuration Options and click **SAVE** when changes have been completed

When all Admin Console changes have been completed, press the  $\ensuremath{\textbf{Update}}$   $\ensuremath{\textbf{Now}}$  button

Close the Admin Console

#### Start the Operator Console

- Logon with the assigned Operator ID and Password or as the admin
- Specify the IP Address of the TalkMaster Server (specify 127.0.0.1 if the Operator Console is running on the TalkMaster Server PC)

Logon Required		×
Logon ID Password		
Login	Cancel	<< Options
Address	127.0.0.1	; 3010
Use Conso	le UDP/RTP	23010

• IP Endpoints will appear on the **Intercoms** tab or as part of one or more paging groups on the **Paging Groups** tab of the Operator Console
