# TalkMaster™ FOCUS VoIP Connect

## V6.0.3 Release Notes

September 2020

---

### TalkMaster FOCUS VoIP Connect

- Recompiled with latest DLLs for V6.0.3

---

# TalkMaster™ FOCUS VoIPConnect

## V6.0.2 Release Notes

March 2020

---

### **TalkMaster FOCUS VoIP Connect**

- Moved location of log files to a common location for both the service and the configuration application
- Fixed compatibility with OnSIP when using external phone numbers
- Minor windows compatibility fixes
- Fixed an issue that occurred when a Paging Group was updated

---

# TalkMaster™ FOCUS VoIPConnect V6.0.0 Release Notes

July 2018

---

TalkMaster FOCUS VoIP Connect

- Recompiled for compatibility with TalkMaster FOCUS V6.0.0

---

# V5.2.5 Release Notes

January 2018

---

## TalkMaster FOCUS VoIP Connect

- Corrected an issue where both the **VoIP Connect Service** and the **VoIP Connect Configuration Console** would crash if a **Paging Group** that had been assigned a SIP Extension was deleted in the Admin Console
- In the VoIP Connect Configuration Console, if an extension is assigned to a deleted Paging Group, an error is displayed under **SIP Status** on the **Extensions** tab. The invalid entry can be removed by right-clicking and selecting the **Remove Extension** option
- Corrected an issue where the **VoIP Connect Configuration Console** would occasionally crash while editing the Extension for a Paging Group

---

## V5.2.3 Release Notes

March 2017

---

**TalkMaster FOCUS VoIPConnect** is now compatible with **TalkMaster FOCUS V5.2.3**

---

## V5.2 Release Notes

June 2016

---

### VoIP Connect Service

- Many stability enhancements for the VoIP Connect Service

---

# V5.1 Release Notes

December 2015

---

## TalkMaster FOCUS VoIP Connect

- The **SIP Gateway Console** will no longer be used. Instead, the **VoIP Connect Configuration Console** will be used to assign SIP extensions to one or more IP Endpoints and the **VoIP Connect Service** will run as a background service and process the SIP calls
- Existing SIP extensions for individual IP7 Endpoints can be converted by installing and running the **SMG Console Conversion Utility from the Installation menu**. Once installed, run the **SMG Console Conversion Utility** from the Windows Start menu
- Existing SIP extensions for group extensions will **NOT** be converted. The SIP extensions for groups of IP7s now use Server based Paging Groups. Instead of specifying the individual IP7s belonging to the group:
  - Open the **Admin Console**  
Create **Paging Groups** for group extensions that were defined in the **SMG Console** (the **SMG Console** will still be available for reference)
  - Open the **VoIP Connect Configuration Console**
  - Select the **Groups** tab
  - Double click on a Paging Group and assign the SIP extension information
- The Windows Service **TalkMaster FOCUS VoIP Connect Service** will be automatically started when the PC is started and use the settings from the **VoIP Connect Configuration Console**
- The **TalkMaster FOCUS VoIP Connect Service** must be configured to connect to the TalkMaster FOCUS Server using the **VoIP Connect Service Configuration** utility. Supply the Username and Password (as defined in Admin Console → Operators) as well as the IP Address of the TalkMaster FOCUS Server
- The **SIP Gateway Console** should no longer be used. Once all of the configuration Information has been converted to the **VoIP Connect Configuration Console**, the **SMG Console** can be uninstalled and removed from the Windows Startup Folder
- The **SMG Console Conversion Utility** may also be uninstalled after after the SIP extensions have been converted
